- Display settings

I change the 1080p resolution at 100% DPI scaling prevents distortion and text-blurring inside virtualized management tools

- Power settings

Set both Screen: Turn off after and Sleep: Put device to sleep after to Never, the Server workloads and automated background provisioning scripts must not be interrupted by automatic sleep transitions or display power-down states

- Accessibility settings

Set Text size and adjust the slider to 110% or 120%, clicking Apply, High-contrast indicators and enlarged pointer visibility reduce visual fatigue during prolonged terminal troubleshooting and ensure operational
